

Decision Requirement Diagram

Elements

flatten1 (Decision)

Output Data Type

Type	tStringList
------	-------------

Decision Logic (Boxed FEEL Expression)

flatten1

flatten(appendListItem)

min1 (Decision)

Output Data Type

Type	Number
------	--------

Decision Logic (Boxed FEEL Expression)

min1

```
min(numList)
```

appendListItem (Decision)

Output Data Type

Type	tListOfLists
------	--------------

Decision Logic (Boxed FEEL Expression)

```
appendListItem
```

```
append(list1,list2)
```

listContainsList (Decision)

Output Data Type

Type	Boolean
------	---------

Decision Logic (Boxed FEEL Expression)

```
listContainsList
```

```
list contains(list1,list2)
```

listContains (Decision)

Output Data Type

Type	Boolean
------	---------

Decision Logic (Boxed FEEL Expression)

```
listContains
```

```
list contains(list2,string1)
```

count1 (Decision)

Output Data Type

Type	Number
------	--------

Decision Logic (Boxed FEEL Expression)

count1

```
count(list1)
```

indexOf1 (Decision)

Output Data Type

Type	tNumList
------	----------

Decision Logic (Boxed FEEL Expression)

indexOf1

```
index of(list2,string1)
```

sum1 (Decision)

Output Data Type

Type	Number
------	--------

Decision Logic (Boxed FEEL Expression)

sum1

```
sum(numList)
```

☐ **list1 (Input Data)**

Output Data Type

Type	tStringList
------	-------------

☐ **list2 (Input Data)**

Output Data Type

Type	tStringList
------	-------------

☐ **string1 (Input Data)**

Output Data Type

Type	Text
------	------

☐ **numList (Input Data)**

Output Data Type

Type	tNumList
------	----------

☒ **mean1 (Decision)**

Output Data Type

Type	Number
------	--------

Decision Logic (Boxed FEEL Expression)

mean1

mean(numList)

☒ **mean2 (Decision)**

Output Data Type

Type	Number
------	--------

Decision Logic (Boxed FEEL Expression)

mean2

mean(num1,num2,num3)

sublist12 (Decision)

Output Data Type

Type	tStringList
------	-------------

Decision Logic (Boxed FEEL Expression)

sublist12

```
sublist(list1,1,2)
```

sublistLast (Decision)

Output Data Type

Type	tStringList
------	-------------

Decision Logic (Boxed FEEL Expression)

sublistLast

```
sublist(list1,-1,1)
```

concatenate1 (Decision)

Output Data Type

Type	tStringList
------	-------------

Decision Logic (Boxed FEEL Expression)

concatenate1

```
concatenate(list1,list2)
```

insertBefore1 (Decision)

Output Data Type

Type	tStringList
------	-------------

Decision Logic (Boxed FEEL Expression)

insertBefore1

```
insert before(list2,2,string1)
```

distinctVals (Decision)

Output Data Type

Type	tStringList
------	-------------

Decision Logic (Boxed FEEL Expression)

distinctVals

```
distinct values(insertBefore1)
```

☐ **num1 (Input Data)**

Output Data Type

Type	Number
------	--------

reverse1 (Decision)

Output Data Type

Type	tStringList
------	-------------

Decision Logic (Boxed FEEL Expression)

reverse1

```
reverse(concatenate1)
```

union1 (Decision)

Output Data Type

Type	tStringList
------	-------------

Decision Logic (Boxed FEEL Expression)

union1

```
union(insertBefore1,concatenate1)
```

append1 (Decision)

Output Data Type

Type	tNumList
------	----------

Decision Logic (Boxed FEEL Expression)

append1

```
append(numList,num1,num2)
```

☐ **num2 (Input Data)**

Output Data Type

Type	Number
------	--------

☐ **num3 (Input Data)**

Output Data Type

Type	Number
------	--------
